

LAB 4

Configure DHCP within a LAN and outside LAN.

OBSERVATION:

4A] Lab-4

Aim:
Configure DHCP within a LAN and outside LAN

Topology:-

```
graph TD
    Switch[Switch-PT  
Switch 0] --- PC0[PC-PT  
PC-0]
    Switch --- PC1[PC-PT  
PC-1]
    Switch --- PC2[PC-PT  
PC-2]
    Switch --- PC3[PC-PT  
PC-3]
```

Procedure:-

- > connect 3 PCs and 1 server to a switch using copper straight through cable
- > click on server & go to services tab select DHCP and turn on the DHCP services
- > set the IP address of the server IP address as 10.0.0.2 & click on save button.
- > Before this set the IP address of server in config Tab under fastEthernet as 10.0.0.1
- > next click on PC0 and go to desktop tab here click on IP configuration select DHCP here it will request for an IP address & successfully gets the DHCP request also sets the IP address.

→ Repeat this step for other 2 PC's

20

→ to send a packet across PC's go to PC's command prompt & type ping destination IP address

Ping output:-

Packet trace PC command line 10

PC > ping 10.0.0.3

Pinging 10.0.0.3 with 32 bytes of data:

Reply from 10.0.0.3: bytes=32 time=0ms TTL=128

Reply from 10.0.0.3: bytes=32 time=0ms TTL=128

Reply from 10.0.0.3: bytes=32 time=1ms TTL=128

Reply from 10.0.0.3: bytes=32 time=0ms TTL=128

Ping statistics from 10.0.0.3:

Packets: sent = 4, Received = 4, Lost = 0 (0% loss)

Approximate round trip times in milliseconds

Minimum = 0ms, Maximum = 1ms, Average = 0ms

Observation:-

→ DHCP is used to dynamically assign an IP address to any device or node.

→ It is a client-server protocol in which servers manage a pool of unique IP addresses & also about client configuration parameters.

→ The DHCP server responds to the client request by providing IP configuration information from address pools, previously specified by a network administrator.

4[B]

Aim: configure external DHCP within a LAN & outside LAN

Procedure:-

-> Add a router, a switch & 2 PC's to LAN program network & connect the router to both switches.

-> set the server IP address of server & with the help of server set the host 3 PC's IP address through DHCP

-> click on server

-> go to desktop -> IP configuration

-> Add IP address, subnet mask & gateway

IP address 10.0.0.1

subnet mask 255.0.0.0

Gateway 10.0.0.20

step 3:- configure the router

→ click on router go to cli
enable

Router# config t

Router(config)# fastEthernet 0/0

Router(config)# ip address 10.0.0.20 255.0.0.0

Router(config-if)# no shut

Router(config-if)# exit

Router(config)# interface 1/0

Router(config-if)# ip address 20.0.0.20 255.0.0.0

Router(config-if)# no shut

Router(config-if)# exit

exit

Routing enable

Router# show ip route

C. 10.0.0.0/1 is directly connected fe 0

step 4:- Go to server [DHCP server config]

→ select services then go to DHCP

→ set service on

→ set start IP address from (ex - 20.0.0.0) to
save

→ step 5:- then configure the PC's

Select a PC then desktop - go to IP config
select DHCP

→ Repeat the same procedure for all other 23 PC's

Observation:-

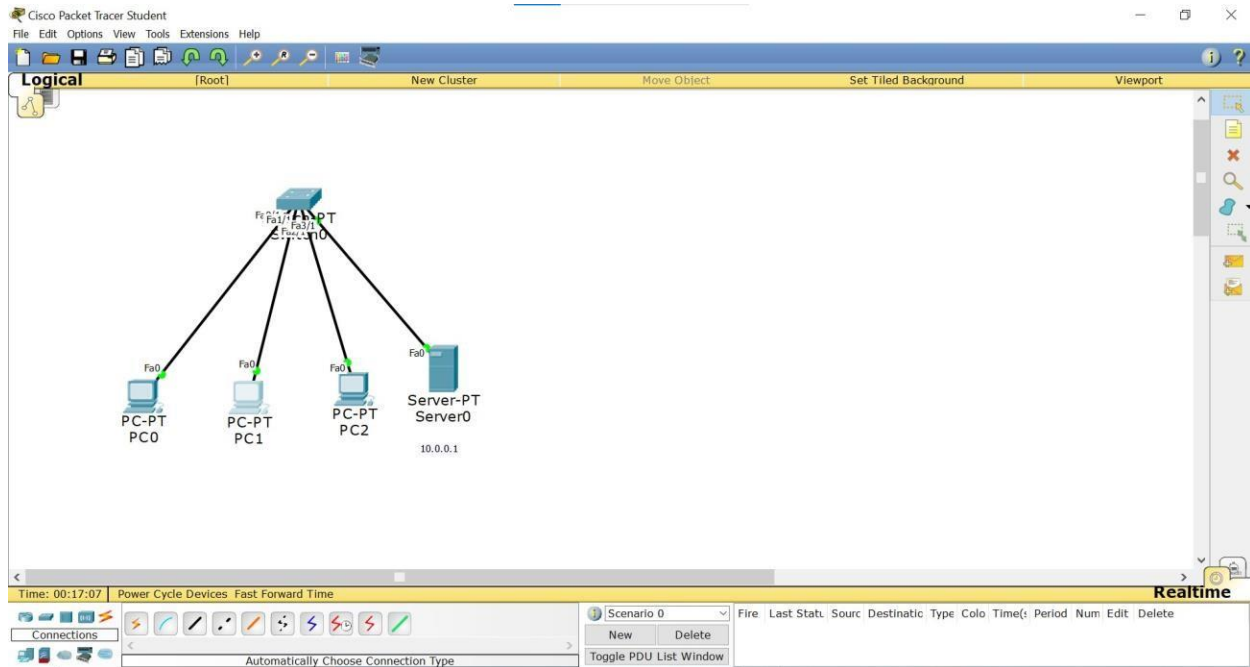

→ DHCP is used to assign IP address dynamically to different devices

→ To assign continuous IP address we create a server pool where we assign the starting IP address & a default gateway number for PC's under different switches we create a different server pool again & so on.

```

PROGRAM 4.2:

PC0

Physical Config Desktop Custom Interface

Command Prompt

```
Packet Tracer PC Command Line 1.0
PC>ping 20.0.0.2

Pinging 20.0.0.2 with 32 bytes of data:

Request timed out.
Reply from 20.0.0.2: bytes=32 time=0ms TTL=127
Reply from 20.0.0.2: bytes=32 time=0ms TTL=127
Reply from 20.0.0.2: bytes=32 time=0ms TTL=127

Ping statistics for 20.0.0.2:
    Packets: Sent = 4, Received = 3, Lost = 1 (25% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 0ms, Maximum = 0ms, Average = 0ms

PC>ping 20.0.0.3

Pinging 20.0.0.3 with 32 bytes of data:

Request timed out.
Reply from 20.0.0.3: bytes=32 time=0ms TTL=127
Reply from 20.0.0.3: bytes=32 time=0ms TTL=127
Reply from 20.0.0.3: bytes=32 time=0ms TTL=127

Ping statistics for 20.0.0.3:
    Packets: Sent = 4, Received = 3, Lost = 1 (25% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 0ms, Maximum = 0ms, Average = 0ms
